DETAILED ACTION

1. Claims 1-to-4 are pending in the application.

Allowable Subject Matter

2. Claims 1-4 are allowed.
3. Claims 1-4 are allowable over the prior art of record because the cited references do not contain the specified limitation of a CDMA receiver terminal comprising: a plurality of first finger means each for inversely spreading signals transmitted from a base station using two antennas in a transmission diversity mode for demodulating the signals; and a plurality of second finger means each combined with each of said plurality of first finger means, each of said second finger means including: means for separating inverse spread data for the signal inversely spread by said first finger means into inverse spread data for a signal transmitted from one antenna of said base station and inverse spread data for a signal transmitted from the other antenna of said base station, and for correcting the phase of the respective inverse spread data; and means for determining the validity for the signals respectively transmitted from the two antennas of said base station and for stopping the supply of operating clock to said means for correcting the phase of inverse spread data for a signal which is determined as invalid.
